

26 SEPTEMBER 2026

Meeting: Fifth Weekly Project Meeting for SMPIS

Time: 9:00 PM to 9:54 PM

Platform: Discord

Attendance: 10 of 11 members present (Quorum met)

Absentees: Nexus Paloma

I. CALL TO ORDER

The fifth weekly project meeting was called to order at 9:00 PM. 10 of 11 members were present.

II. AGENDA AND DISCUSSION

1. Discussion of the Universal Design System

The system now strictly adheres to the **Claude+** color palette and overall design structure.

- All colors (accents, foreground, texturing, etc.) are centralized in the root of **global.css**; this must be used as the standard for all design tasks.
- Dark mode and light mode are fully integrated into the **design system** and are automatically handled upon using the universal design system file.
- Typography standards were established: Primary headings (30-40px), Secondary headings (18-22px), and Paragraph/description text (12px).
- Color roles were defined: Foreground color is used to highlight text, while muted colors are used for description text.
- Status badges and tag fields are fully implemented as suggested during the previous presentation.
- Buttons have affordances enabled, uniform text and colors (no outlining), and a standard default size that can be adjusted as needed.
- Text boxes and input fields are standardized in size and scaling, with rich text formatting to be enabled.
- Standard card designs are available and can be resized if necessary. Chat cards utilize the general card design but are resized to fit the chat interface.
- The chat box is responsive and adjusts to text length. All chat responses are visually distinct with an orange name indicator. A discussion was held regarding the text color for the user's own message header indication.
- Tables are standardized with embedded tag fields and improved Quality of Life (QoL) affordances, such as a "select all" function.
- User profiles are standardized with affordances; clicking a profile opens a summary. Button links within profiles are fully implemented.

- The signup and login interfaces were updated to a 2-card design (as the design system's default was empty). The left card now displays system details, a change **agreed upon by the majority of the members**.
- The footer is standardized with appropriate details, clarifying the system version as 1.0 (the golden code).
- **QA Suggestions Addressed:**
 - **Checkboxes:** The default white was too bright for dark mode. A #52514a gray was suggested per Claude+ design, but the Frontend Lead advised against gray, deciding on a dirty white to maintain visibility.
 - **Chat Bubbles:** To differentiate user and AI messages (similar to Messenger), the professor's chat bubble will use a different color from the AI text box. The **UI/UX group** will finalize the colors, considering orange and muted orange.

2. Next Steps and Best Practices

With the design system complete, **frontend team** will commence the system redesign.

- **Task Delegation:** GitHub issues have been created. Members may self-assign tasks; the Project Manager (PM) will delegate any unclaimed issues.
- **PR Tracking:** Developers must use strikethrough formatting (or similar markdown) in PR comments to track addressed issues and mark them as completed.
- The **Design System** must be used at all times for any UI changes moving forward.
- **QA PR Review Protocol:** The Frontend Lead mandated that at least one QA member must review Frontend PRs to provide bite-sized feedback. Valid reasoning must be provided in the PR comments **for any redesigns**. The **majority agreed** to this for better task micromanagement within the QA team.
- The PM will create a new issue documenting the expected behavior for **every click interaction**.
- The **Backend Lead** (Radz Ponce Moreno) will conduct an **internal discussion** with the backend team regarding their best practices.
- For every PR, developers must **update the changelog** based on the guidelines posted in the **rules-and-guideline** channel.

III. DECISION MADE

- The universal design system, based on the Claude+ palette and centralized in **global.css** and **design-system.html**, is finalized and mandatory for all UI development.

- Signup and login screens will utilize the approved 2-card layout.
- Frontend PRs now strictly require a review and feedback from **at least one QA** member before merging.
- Dark mode checkboxes will use a dirty white color, and chat bubbles will be color-coded to distinguish between faculty and AI messages.

IV. ACTION ITEMS

ACTION ITEM	RESPONSIBLE MEMBER(S)	STATUS
Implement UI redesign using the Design System	Frontend Team	Ongoing
Review Frontend PRs and provide bite-sized feedback	QA Team	Ongoing
Discuss and establish backend best practices	Radz Ponce Moreno Backend Lead	Pending
Update the changelog for every new Pull Request	Frontend and Backend Teams	Ongoing

Note: "Pending" status indicates the task is yet to be initiated internally.

V. ADJOURNMENT

The meeting was concluded at 9:54 PM following the finalization of the design system components and the establishment of new PR and QA review protocols.

VI. SIGNATORIES

Prepared by:

Geryme M. Vega

Secretary, SPMIS

Noted by:

Norman John Bandibas

Project Manager, SPMIS
